

SEMICONDUCTOR
SERVICES, INC.

Smart Solutions for the Semiconductor Industry

Innovative. Smart.

Delivering Maximum Yield to Our Customers

C&D is a leading manufacturer of equipment for wafer processing, wafer inspection, and wafer sorting equipment for the semiconductor and related industries. We offer a wide range of products that include, among others, a state-of-the-art photolithography cluster system, advanced microscope loader, and intuitive wafer sort system.

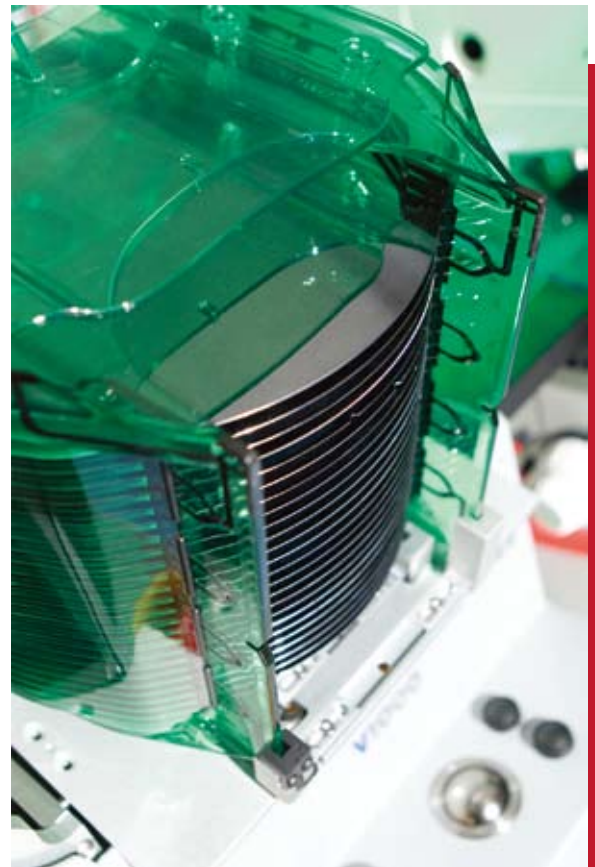

We continue to be a fast growing company. Our main engine for growth is our unique ability to provide high performance systems that truly deliver maximum benefits to our customers. We have the awareness and flexibility of a small company and the resources and technical know-how of a large company. These benefits provide us with the ability to design, develop, and manufacture systems that ensure our customers meet their goals of improved manufacturing and increased yield. This is why our customers continue to reward us with their business.

Our History

C&D began in 1989 with its focus on providing solutions and enhancements to the 8000-Series photoresist processing equipment. We improved these OEM systems to include newly engineered components such as robot arms, heaters, controllers, and spin modules -- all with the goal of giving our customers a production edge without the high cost.

Over the years, C&D has continued to lead the way to innovative technologies.

- In 2002, C&D developed the P7000 Track System for metal ohmic alloying. C&D's alloy track provides a lower cost and highly reliable alternative to expensive RTA equipment normally used for metal alloying.
- In 2004, C&D introduced the P8030 Frame Processing Track System with superior ability to coat or solvent strip wafers that are mounted on frames.
- In 2007, C&D acquired a UK based manufacturer of wafer handling systems including the market leading S4000/S5000 wafer sorter and V1000 Microscope Loader which both represent technological innovation for the semiconductor industry.
- In 2008, C&D released the leading-edge technology P9000 Cluster System which offers high throughput processing in a small footprint.

Our Products

We offer an array of products that serve the semiconductor manufacturing industry. Our products range from intuitive wafer inspection and sorting systems to high productivity coating systems.

smartView

C&D's **smartView** product family includes the **V1000 Microscope Loader** and the **V2000 Bright Light Inspection System**.

The **V1000** is an advanced and flexible PC controlled microscope loader that can interface to any microscope. The **V2000 Bright Light System** is a 2 cassette inspection station for detecting all kinds of gross defects.

smartSort

C&D's **smartSort** product family includes the **S4000** and **S5000 Wafer Sorters**.

The **S4000** is a 2 cassette benchtop wafer sorter that is big in flexibility and ergonomics and small in footprint and price. The **S5000 Wafer Sorter** is a floor standing four cassette wafer sorter that has industry leading throughput and an innovative and intuitive Software Interface.

smartPro

C&D's **smartPro** product family includes the **P7000 Alloy System**, **P8000 Linear Track System** and **Frame Processor**, **P9000 Cluster System**, and **SVG Track Systems**.

The **P7000**, **P8000**, and **SVG** systems are linear track systems that can be configured as stand alone or cassette to cassette transfer with either belts or robot arms. The **P9000 Cluster System** has a tremendous amount of flexibility, designed for high throughput, built within a small footprint.

Our Mission

We endeavor to be acknowledged as a leader in the semiconductor equipment manufacturing industry. To achieve this, we provide our customers with high quality, innovative, and cost-effective solutions. We maintain a friendly, fair, and creative work environment which respects diversity, new ideas, innovation, and hard work.

Global Customer Support

We understand that well delivered support and service are critical elements in the industry. We deliver on our commitment to offer high quality service and support delivered by experienced engineers and support staff with broad product and systems knowledge.

We offer the following services to ensure our products maintain their peak performance.

- On-site service and training
- System optimization
- Engineering and technical support
- Preventive maintenance
- Custom upgrades
- Retrofits

"Our business policies continue to be Better Prices, Better Quality, and Better Relationships that feel more like friendships. That's what we at C&D call 'smart business'!"

Dong Nguyen, President

Our Values

These are the fundamental values that have been the driving force of our success.

Customer Focus

Our ability to understand our customers' needs has been the key to our success. We are responsive, flexible, and go the extra mile to find the best solution.

Quality and Innovation

We strive to create and develop systems that are highly innovative and reliable. We provide an array of products that help our customers achieve the extra measures of precision, reliability, speed, and yield.

High Productivity at Excellent Value

We offer our customers solutions that enable them to improve their productivity while maintaining high profitability.
